### BOOK REVIEW

William J. Serdahely, Ph.D.  
*Montana State University*

**A Brief History of Time: From the Big Bang to Black Holes**, by Stephen W. Hawking. New York, NY: Bantam Books, 1988, 198 pp, \$18.95

In February of 1989 I attended a lecture by the prominent physicist Kip Thorne titled "Black Holes, White Holes, Wormholes, and Tunnels Through Hyperspace." The flyer announcing Thorne's lecture declared that tunnels in hyperspace "can lead quickly forward in time to the end of the universe and beyond," and I immediately thought of the tunnels commonly described by near-death experiencers (NDErs) leading to the light beyond. I attended Thorne's presentation hoping to find some confirmation of near-death phenomena from the world of physics.

For a very similar reason, I recently read *A Brief History of Time*, by the eminent theoretical physicist Stephen Hawking. Hawking's goal was to write a book for the lay audience summarizing the latest thinking on the questions that motivated him to do research in quantum theory: "Where did the Universe come from? How and why did it begin? Will it come to an end, and if so, how?" (p. vi). What I found was that Hawking's book *does* help near-death researchers explain some of the phenomena commonly described by NDErs. But, interestingly enough, near-death theory and near-death research reciprocally help explain some of the unanswered questions posed by Hawking, as he takes the reader through explanations of the very tiniest bits of matter to the very boundary of a vast universe.
